Team Overview

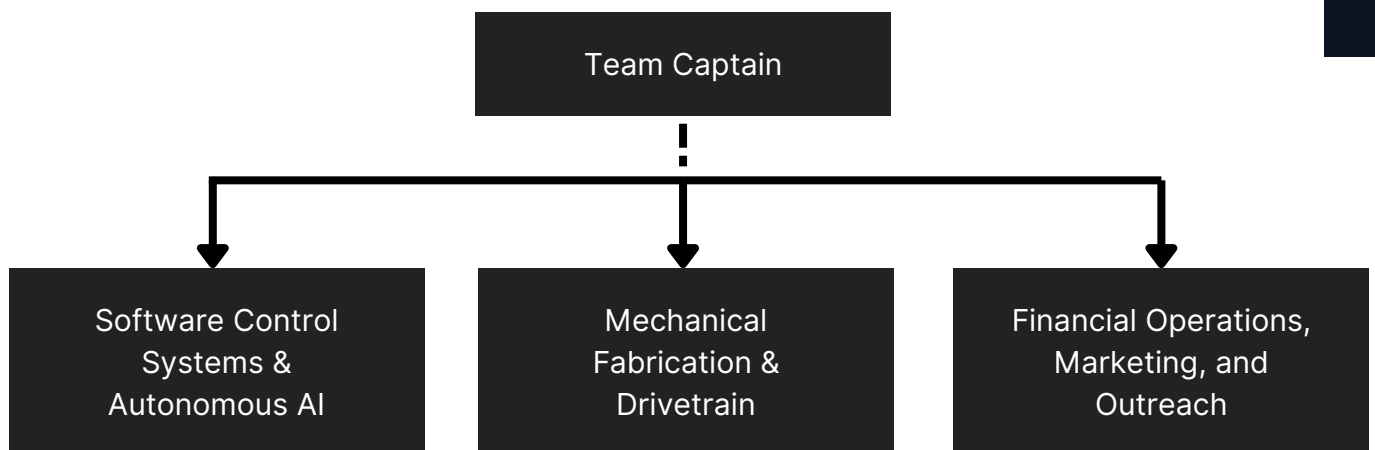

Page 03

Our Journey & Mission

Rising from a year-long funding freeze, SWERVO Robotics returns to the competitive arena as a fully self-sustained engineering force. Our mission extends beyond building high-performance competitive robots; we are actively pioneering a highly inclusive future for competitive youth STEM. By introducing a unique dual-team operational model, we maintain an elite drive team focused on top-tier engineering milestones while simultaneously running an internal developmental league. This structure ensures that any student, regardless of prior technical background or economic barriers, has immediate, hands-on access to advanced mechanical design and open-source software development.

Operational Flowchart

SWERVO Robotics operates on a structured, multi-tiered hierarchy to mimic professional engineering firms. This departmental framework ensures cross-functional collaboration, distinct accountability, and rapid development timelines across all technical and operational milestones.

Season Timeline

Page 04

1

Sept – Oct '26

Deep firmware configuration, mechanical fabrication, and control systems integration.

2

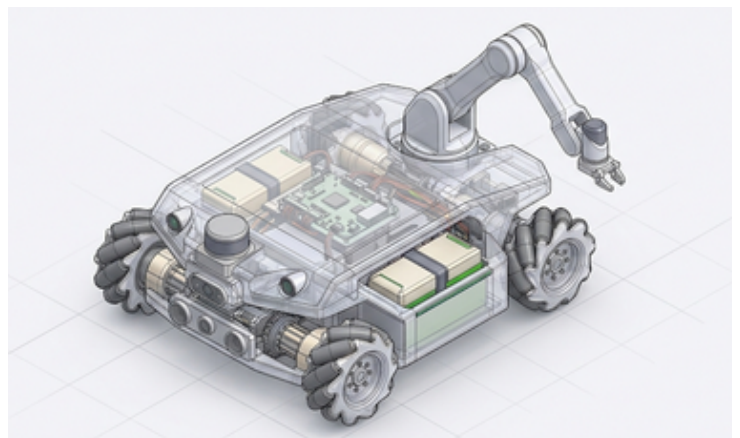

Nov '26- Mar '27

Launching at our late-November tournament, continuous robot optimization, and advancing through regional qualifiers to the provincial level, and hopefully the international level.

3

Apr '27 onwards

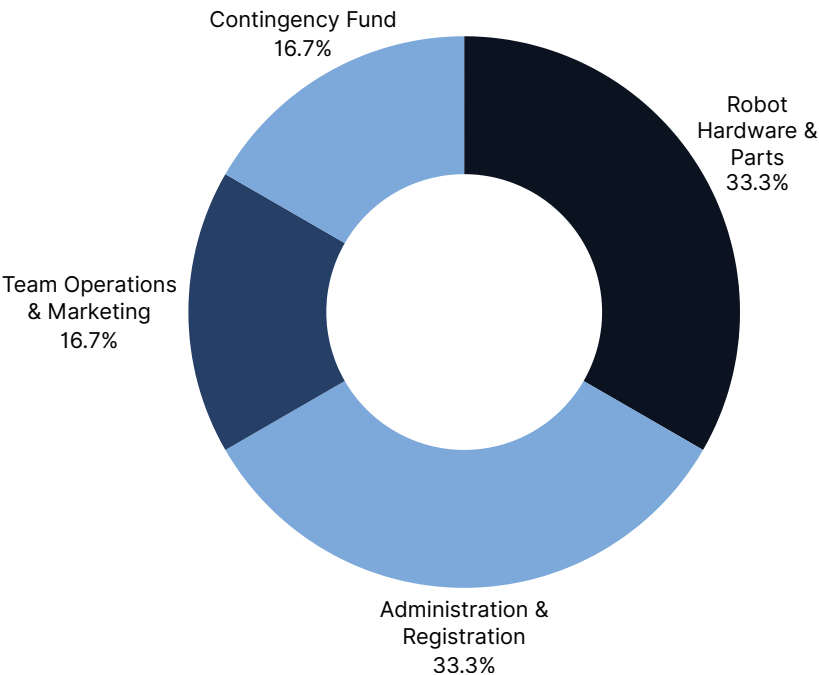

Hosting interactive live-robot demonstrations at local middle schools, running tech showcases at our own school, and inspiring the next generation of youth engineering talent.

Budget & Expenses

Fiscal Responsibility & Allocation Strategy

Following a highly disciplined restructuring phase, SWERVO Robotics operates on a transparent, optimized financial model. Our projected operating budget for the upcoming competitive season is strategically itemized to cover advanced hardware fabrication, precision electronic components, tournament registration fees, and community-level STEM outreach infrastructure. Ensuring a fully funded pipeline directly translates to accelerated engineering timelines and expanded regional impact.

Detailed Expenses Breakdown

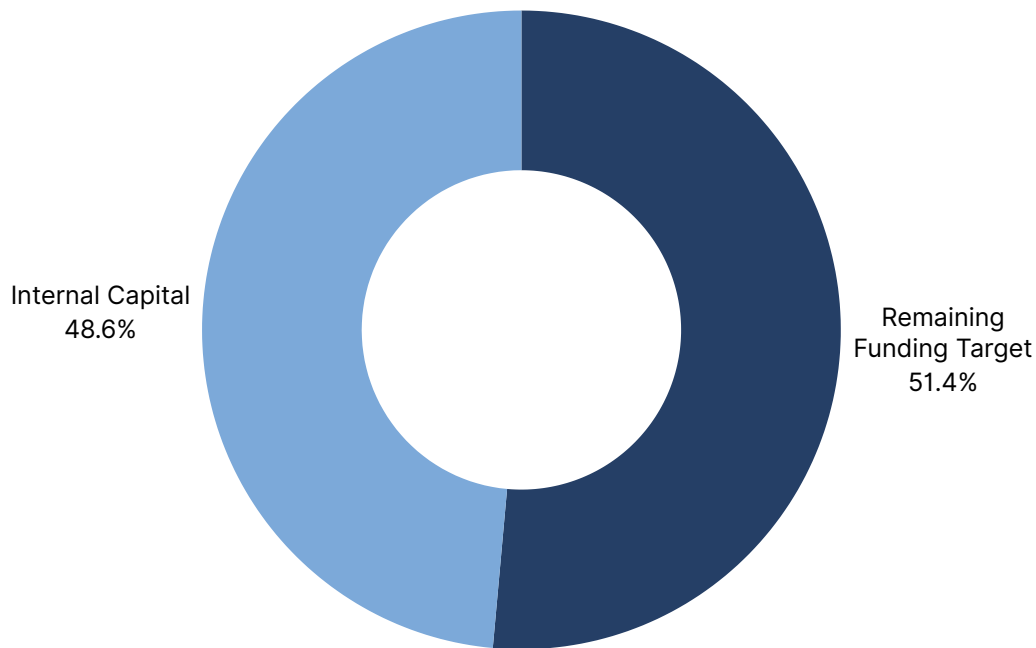

Expense Category	Description	Budget
Robot Hardware & Parts	REV Robotics Control/Extension Hubs (\$500), raw metals and structural materials (\$500), and miscellaneous mechanical components (\$500).	\$1,000
Administration & Registration	Official FTC team registration fees and tournament entry allocations.	\$1,000
Team Operations & Marketing	Team promotional banner, outreach apparel, and presentation media.	\$500
Contingency Fund	Emergency on-field replacement parts and rapid prototyping reserves.	\$500
Total	Complete fiscal requirement for full season execution.	\$3,500

Financial Situation

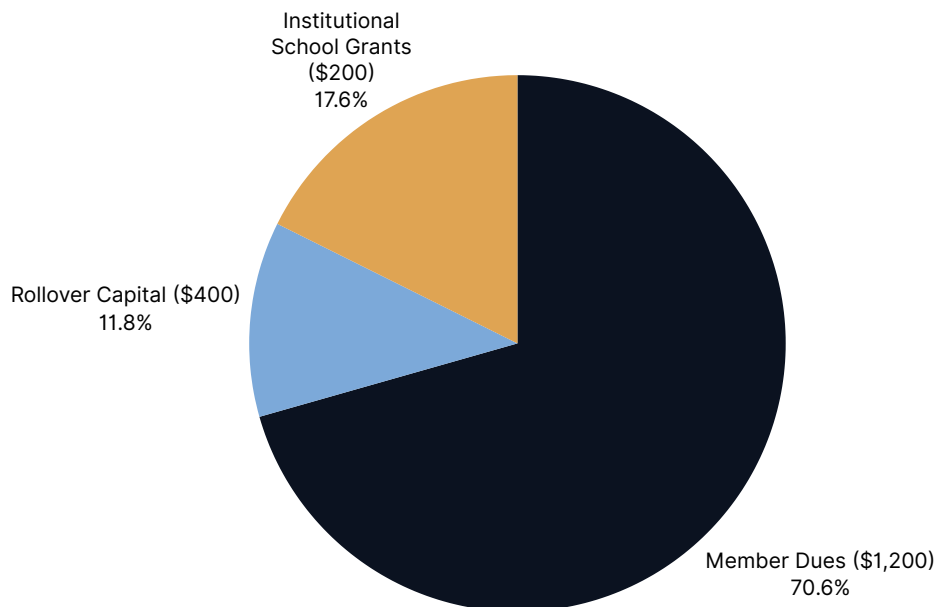

Page 06

The Total Funding Runway

Team 26256 has already self-funded \$1,800 to lock down our operational baseline. Corporate partnerships directly bridge the remaining gap to fund advanced engineering hardware and tournament scale.

Internal Equity

Our operational baseline is fully self-funded by our team and school footprint. Members contribute \$1,200 ($\80×15) to cover apparel and travel baseline costs, while \$400 in retained capital and \$200 in institutional school council grants cover initial administrative overhead. This ensures 100% of external corporate sponsorship goes directly to the robot and competition machinery.

Partnership Tiers

Why Sponsor Us

Partnering with SWERVO Robotics offers your company a unique platform to directly foster local tech talent while gaining high-visibility brand exposure across competitive arenas and community STEM showcases. Your investment directly funds critical engineering resources, empowering our team to scale its technical impact and inspire the next generation of youth innovation.
